 Vincent Sutiono

 VincentSVSutiono

Graduated with a degree in Computer Engineering from Multimedia Nusantara University, with hands-on expertise spanning full-stack web development and applied machine learning. I thrive on translating theoretical principles into robust, production-ready solutions. Passionate about continuous learning and collaborative engineering, my objective is to deliver reliable, high-performance web applications and intelligent systems that solve real-world problems.

Experiences

AI Engineer (Freelance)

March 2026 - June 2026

Prostate Cancer Classifier

- Redesigned an existing patch-based pipeline for classifying prostate histopathology slides as benign or malignant into an **attention-based Multiple Instance Learning (MIL)** framework, enabling **slide-level predictions** that better reflect real pathologist workflows
- Identified and corrected data integrity issues in the prior evaluation pipeline, implementing **patient-level splitting** and **strict separation of augmented data** from validation/test sets to ensure reported metrics reflect true generalization
- Achieved **96%–97% accuracy** and **sensitivity** with **98%–99% specificity**, ensuring high diagnostic reliability and minimal false negative rates for clinical decision support.

Tools : Python, CNN, Vision Transformer, Multiple Instance Learning (MIL), Digital Pathology

Frontend Developer (Internship)

February 2025 - June 2025

Smplhr - Jakarta, Indonesia

A startup company that simplifies finding, hiring, and managing talent

- Collaborated with the design team to transform UI/UX concepts into **functional, responsive** components
- Implement **data-fetching and mutation** logic using **TanStack React Query** to interact with backend APIs, including retrieving, creating, and updating data for frontend applications
- **Improved web performance** by implementing methods such as lazy loading and pagination

Tools : React, Javascript, Tailwind CSS, Mockoon, Tanstack Query

Project

H&S Rajawali Motor Website

May 2026 - August 2026

Full Stack Developer

A project to develop a car accessories catalog website to help a local shop owner showcase their products online

- Built a **responsive** product catalog with real-time search and category filtering using React and TanStack Query
- Developed a **RESTful API** with Express and PostgreSQL via Prisma ORM to manage products, brands, and categories
- Implemented **JWT cookie-based authentication** to secure the admin panel for inventory management
- Integrated a **WhatsApp inquiry system** that generates pre-filled messages based on the customer's selected product, brand, and car specifications

Tools: React, TypeScript, Express, PostgreSQL, Prisma, Tailwind CSS

Skills

- **Programming Languages** : Typescript, Python, C++
- **Web Development**: Front-End (React, Tailwind CSS), Back-End (Node JS, Express, Prisma), Database (MySQL/PostgreSQL)
- **Machine Learning**: Pytorch, Tensorflow
- **Developer Tools**: Github, Postman
- **AI Tools**: Antigravity, OpenCode
- **Language**: English & Bahasa

Education

Apple Developer Academy @Bali <i>Challenge-Based Learning (Design, Coding & Professional Skills)</i>	March 2027 - December 2027
Multimedia Nusantara University (UMN) <i>Bachelor Computer Engineering (S.T.)</i> Current GPA: 3.86/4.00	August 2022 - August 2026

Organizations

ACES <i>Academic Member</i> A student organization that supports the Computer Engineering student body through academic, social, and professional activities. Conducted peer tutoring sessions to help fellow Computer Engineering students prepare for examinations by explaining technical concepts and solving practice problems	February 2025 - January 2026
